|                              | Hemant Patel           | 2614                |  |

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

1) Responsive to communication(s) filed on 02 October 2006.  
 2a) This action is **FINAL**.                            2b) This action is non-final.  
 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

4) Claim(s) 1-32 is/are pending in the application.  
 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.  
 5) Claim(s) \_\_\_\_\_ is/are allowed.  
 6) Claim(s) 1-32 is/are rejected.  
 7) Claim(s) \_\_\_\_\_ is/are objected to.  
 8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

9) The specification is objected to by the Examiner.  
 10) The drawing(s) filed on \_\_\_\_\_ is/are: a) accepted or b) objected to by the Examiner.  
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).  
 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).  
 a) All    b) Some \* c) None of:  
 1. Certified copies of the priority documents have been received.  
 2. Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.  
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

1) Notice of References Cited (PTO-892)  
 2) Notice of Draftsperson's Patent Drawing Review (PTO-948)  
 3) Information Disclosure Statement(s) (PTO/SB/08)  
 Paper No(s)/Mail Date \_\_\_\_\_

4) Interview Summary (PTO-413)  
 Paper No(s)/Mail Date. \_\_\_\_\_

5) Notice of Informal Patent Application

6) Other: \_\_\_\_\_

### **DETAILED ACTION**

1. The Applicant Response dated October 2, 2006 to an Office Action dated July 13, 2006 is entered. Claims 1-32 are pending in this application.

#### ***Response to Arguments***

2. Applicant's arguments filed October 2, 2006 have been fully considered but they are not persuasive.

**Regarding claim 1,** the Applicant argues (Remarks, pg. 16) Farris's 'public switched telephone network' is not a trusted network as claimed in the present application. The Examiner respectfully disagrees. The Examiner would like to point out Applicant's contradiction to their own disclosure by drawing the Applicant's attention to the specification disclosure (pg. 9, ll. 20-pg. 10, ll. 9) where the Applicant has specifically disclosed that a Public Switching Telephone Network is a trusted network and switching of calls and movement of data within it is a trusted movement of information. The Applicant argues (Remarks, pg. 18) Farris does not disclose 'an external server enabled to perform a caller identity authentication service' as claimed in the present application. The Examiner respectfully disagrees. Farris's IP server performing caller identity authentication service (Fig. 1, item 23, IP w/ SIV) is external to central office (CO) (Fig. 1, item 11), external to SCP (Fig. 1, item 19) and STP (Fig. 1, item 15) that are involved in processing the call. The Applicant further argues (Remarks, pg. 20) Farris "does not disclose responsive to receiving, from said external server, an authenticated caller identity of caller utilizing said origin device, specifying services

available to said caller according to said authenticated caller identity". The Examiner respectfully disagrees. Farris clearly teaches of IP performing authentication and determining identity of the caller (Farris, col. 20, ll. 6-13), passing it to the central office that uses it to retrieve and load the profile information for the call and this profile information corresponds to the identified subscriber, rather than to the off-hook line (Farris, col. 20, ll. 14-32), and further this profile information specifies service available to said caller (Farris, col. 20, ll. 33-49).

**Regarding claim 13**, the Applicant makes the same arguments (Remarks pg. 20-26) as those for claim 1. The above explanation for claim 1 also applies to claim 13 arguments.

**Regarding claim 32**, the Applicant argues (Remarks, pg. 36) Farris does not disclose "communications between said authentication service and a caller" and "facilitating, from said telephony device, communications". The Examiner respectfully disagrees. Farris clearly teaches that the IP using "Challenge Phase" prompts user to input specific identifying information and in response to that the caller will speak identifying information into their off-hook phone, and the network will transport the audio signal to the IP (Farris, col. 19, ll. 29-47). Thus, there is clear communication between IP performing caller identification service and the caller facilitated by central office switch.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-14, 17-20, 23-26, 29-32 are rejected under 35 U.S.C. 102(b) as being anticipated by Farris (US Patent No. 6,122,357).

***Regarding claim 1***, Farris teaches of a method for specifying telephone services for a particular caller, comprising:

detecting a call initiation condition from an origin device at a trusted telephone network (col. 18, ll. 8-14);

brokering a connection between said origin device and an external server enabled to perform a caller identity authentication service (col. 18, ll. 22-col. 19, ll. 5, switch brokering connection between off hook line and IP); and

responsive to receiving, from said external server, an authenticated caller identity of a caller utilizing said origin device, specifying services available to said caller according to said authenticated caller identity (col. 20, ll. 6-49, IP authenticating caller and providing virtual ID of authenticated caller which is used to load specific subscriber service profile).

***Regarding claim 2***, Farris teaches of a method wherein said server is accessible via a network outside said trusted telephone network (Fig. 1, item 23, IP is outside of network and is accessed via T1, SMDI or PRI; col. 11, ll. 10-20, ll. 42-54).

***Regarding claim 3***, Farris teaches of a method further comprising:  
retrieving a caller profile for said authenticated caller identity (col. 20, ll. 6-49, IP  
authenticating caller and providing virtual ID which is used to load specific subscriber  
service profile); and  
specifying a selection of services from among a plurality of services that are  
offered for said call according to said caller profile (col. 20, ll. 33-49, variety of services  
selection based on profile).

***Regarding claim 4***, Farris teaches of a method wherein said authenticated caller  
identity is authenticated by a voice utterance of said caller (col. 19, ll. 26-40; col. 19, ll.  
65-col. 20, ll. 5).

***Regarding claim 5***, Farris teaches of a method wherein brokering a connection  
further comprises:

transmitting a request for said caller identity authentication service via a signal  
gateway to a network for accessing said external server (col. 19, ll. 16-40, SCP  
instructing IP);

transferring a prompt for a voice utterance, received from said external server via  
a media gateway, to said origin device (col. 19, ll. 41-43);

transferring a voice utterance by said caller through said media gateway to said  
network for accessing said external server (col. 19, ll. 43-46); and

receiving said authenticated caller identity via said signal gateway at said trusted  
telephone network (col. 20, ll. 14-22).

**Regarding claim 6**, Farris teaches of a method wherein brokering a connection further comprises:

brokering a secure connection between said trusted telephone network and said external server (Fig. 1, SCP, STP, SSP and IP are connected by SS7, T1, PRI, SMDI etc. which are secure telephony networks as is known in the art).

**Regarding claim 7**, it recites a system with a network and means performing functions substantially similar to the method as claimed in claim 1. Farris teaches of such a system (Figs. 1, 2, 3). Refer to rejection for claim 1.

**Regarding claim 8**, refer to rejections for claim 2 and claim 7.

**Regarding claim 9**, refer to rejections for claim 3 and claim 7.

**Regarding claim 10**, refer to rejections for claim 4 and claim 7.

**Regarding claim 11**, refer to rejections for claim 5 and claim 7.

**Regarding claim 12**, it recites a computer program product specifying a recording medium with means recorded on it for performing functions substantially similar to the method as claimed in claim 1. Farris teaches of such a system using computers and software as is well known in the art (Fig. 1, SCP, STP, SSP, IP etc.; Fig. 2, Items 53, 55; Fig. 3, item 23; col. 16, ll. 16-20). Refer to rejection for claim 1.

**Regarding claim 13**, Farris teaches of a method for informing a callee of a caller identity, comprising:

detecting a call initiation condition from an origin device at a trusted telephone network (col. 18, ll. 8-14);

brokering a connection between said origin device and an external server enabled to perform a caller identity authentication service (col. 18, ll. 22-col. 19, ll. 5, switch brokering connection between off hook line and IP); and responsive to receiving, from said external server, an authenticated caller identity of a caller utilizing said origin device, transferring said authenticated caller identity to a destination device, such that a callee receiving said call at said destination device is provided with an identity of a party originating said call (col. 20, ll. 6-32, IP authenticating caller and providing virtual ID; col. 21, ll. 36-col. 22, ll. 28, terminating office receives and delivers caller ID to called party line).

***Regarding claims 14, 17,*** Farris teaches of a method further comprising: filtering content of said authenticated caller identity before transfer to said destination device (col. 22, ll. 41-51, terminating office receives name and number of caller but delivers only partial data of name).

***Regarding claim 18,*** Farris teaches of IP initiating a recording of a call by the central office as a call using default profile providing only E911 service and flat rate local calling, the call being processed as a normal call for caller ID purposes (col. 25, ll. 5-32).

***Regarding claim 19,*** it recites a system with a network and means performing functions substantially similar to the method as claimed in claim 13. Farris teaches of such a system (Figs. 1, 2, 3). Refer to rejection for claim 13.

***Regarding claim 20,*** refer to rejections for claim 14 and claim 19.

***Regarding claim 23,*** refer to rejections for claim 17 and claim 20.

***Regarding claim 24,*** refer to rejections for claim 18 and claim 19.

**Regarding claim 25**, it recites a computer program product specifying a recording medium with means recorded on it for performing functions substantially similar to the method as claimed in claim 19. Farris teaches of such a system using computers and software as is well known in the art (Fig. 1, SCP, STP, SSP, IP etc.; Fig. 2, Items 53, 55; Fig. 3, item 23; col. 16, ll. 16-20). Refer to rejection for claim 19.

**Regarding claim 26**, refer to rejections for claim 20 and claim 25.

**Regarding claim 29**, refer to rejections for claim 23 and claim 26.

**Regarding claim 30**, refer to rejections for claim 24 and claim 25.

**Regarding claim 31**, Farris teaches of a method for controlling caller identification, comprising:

receiving, from a trusted telephone network, an authenticated caller identity for a caller at a telephony device (col. 18, ll. 22-col. 20, ll. 32; col. 21, ll. 36-col. 22, ll. 18), wherein said caller identity is authenticated at a authentication service accessible via a network external to said trusted telephone network (Fig. 1, item 23, IP Remote; col. 11, ll. 42-54), wherein said trusted telephone network initiates said authentication service (col. 18, ll. 22-col. 20, ll. 49); and

controlling output of said authenticated caller identity from said telephony device, such that an individual with access to said telephony device is informed of the identity of said caller (col. 21, ll. 36-col. 22, ll. 51).

**Regarding claim 32**, Farris teaches of a method comprising:

receiving, at a telephony device, a secure communication channel via a trusted telephone network to an authentication service, wherein said trusted telephone network

Art Unit: 2614

initiates said authentication service (col. 18, ll. 7-col. 19, ll. 47; SCP, SSP, IP communicating over secure SS7 network for IP to perform authentication; and col. 20, ll. 6-32, IP returns authenticated identity); and

facilitating, from said telephony device, communications between said authentication service and a caller, such that said authentication service is enabled to authenticate an identity of said caller (col. 19, ll. 25-col. 20, ll. 32).

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 2614

7. Claims 15-16, 21-22, 27-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Farris as applied to claims 14, 20, 26 above, and further in view of Rozenblit (US Patent No. 5,832,072).

***Regarding claim 15***, Farris does not teach of filtering caller identity according to caller identity preferences.

However, in the same field of endeavor, Rozenblit teaches of filtering (blocking) content of caller identity according preference associated with calling identity by the caller (caller selected blocking option) (col. 1, ll. 30-33).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify Farris to include blocking of the caller identity as taught by Rozenblit in order to protect the abused spouse from abuser (Rozenblit, col. 1, ll. 27-30).

***Regarding claim 16***, Farris does not teach of filtering caller identity according to callee identity.

However, in the same field of endeavor, Rozenblit teaches of filtering (replacing) caller number with callee assigned name (callee preference) (col. 7, ll. 11-15).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify Farris to replace caller identity number with assigned name as taught by Rozenblit in order to improve "calling line information delivery technique which preserves the rights of the caller without unduly restricting the flow of useful information to the called party" (Rozenblit, col. 1, ll. 44-46).

***Regarding claim 21***, refer to rejections for claim 15 and claim 20.

**Regarding claim 22**, refer to rejections for claim 16 and claim 20.

**Regarding claim 27**, refer to rejections for claim 21 and claim 26.

**Regarding claim 28**, refer to rejections for claim 22 and claim 26.

### **Conclusion**

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hemant Patel whose telephone number is 571-272-8620. The examiner can normally be reached on 8:00 AM - 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Fan Tsang can be reached on 571-272-7547. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
